## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 1-9 are allowed.

Regarding an independent claim 1, Liang et al. (U.S. Patent No. 6,795,229 B2, herein after referred to as "Liang") teaches an electronic display apparatus including two parallel surfaces wherein the space between the surfaces is filled by colored particles and is divided by orthogonal sidewalls.

Liang et al. (U.S. Pub. 2004/0263946 A9, herein after referred to as "Chung") discloses an electrophoretic display having two parallel layers wherein the space between the layers is filled by colored particles.

Daniel et al. (U.S. Pub. 2004/0119680 A1, herein after referred to as "Daniel") teaches an electrophoretic display media having a cell that includes colored particles and cell walls.

Kishi (U.S. Pub. 2003/0231162 A1, herein after referred to as "Kishi") includes a color electrophoretic display comprising a plurality of pixels, the pixels each contain at least two sets of drive electrodes and colored electrophoretic particles.

However, Liang, Chung, Daniel, and Kishi do not teach the particles to be dielectric and thus the particles are not aligned vertically between the electrodes on the top surface and the electrodes on the bottom surface when the voltages of opposed signs are applied to electrodes on the top and the bottom surface. And the non-dielectric particles are not aligned between the alternative electrodes on the top surface

when the voltages of opposed signs are applied to the electrodes on the top surface and thus the color of the particles does not determine the color of the space as claimed.

The failure to include the particles to be dielectric leads to a failure to disclose the two operable modes of the electronic display apparatus as claimed.

***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Seokyun Moon whose telephone number is (571) 272-5552. The examiner can normally be reached on Mon - Fri (8:30 a.m. - 5:00 p.m.).
